

Eos Explorer

MANAGE THE ENTIRE PRECONSTRUCTION ESTIMATING PROCESS WITH A SINGLE COMPREHENSIVE SYSTEM

Eos Group approaches estimating with a simple, important perspective: estimating is a collaborative process that needs to be managed over time. Producing an estimate is not a single event, not a one-time action, not just a document nor spreadsheet.

Eos Explorer is the first software system designed to manage the entire preconstruction estimating process. It manages the people, the process and the data needed to ensure that you can quickly deliver estimates that are accurate, defensible and comprehensive.

FEATURES

With Explorer, you can:

- Control user capabilities and data access through a comprehensive security system
- Manage an unlimited number of estimates across a single- or multi-office estimating department
- Control the estimate creation process including enforcement of corporate standards and establishing required fields
- Track all estimating-related files (Microsoft Excel® & Word®, PDF, JPG, etc.)
- Create and manage unlimited user-defined job classifications for use in categorizing, retrieving and reporting across estimates
- Track unlimited user-defined company types (Architect, Civil Engineer, Owner's Rep) or user-defined resources (Senior Estimator, Electrical Estimator) and utilization rates across estimates
- Search for estimates in the repository based on user-defined attributes (job size, project characteristic, region, etc.)
- Archive and retrieve past estimates and related documents
- Export directly into Microsoft Excel®, Outlook® & Project®

BENEFITS

The benefits of Eos Explorer can create efficiencies throughout your entire company.

- Gain control of the estimate management process
- Create and manage a master list of all estimates - even across multiple offices
- Establish required fields when creating new estimates
- Enforce the use of templates to ensure consistency
- Control which users can view and edit specific estimate folders
- Search and locate estimates on your local computer, in your regional office, or across multiple offices
- Assign estimating staff to estimates and track resource utilization
- Validate estimates through rule-based diagnostics
- Generate trending reports, perform won/lost analysis, or track volume per estimator, stage or project type
- Generate averages and totals across estimates
- Create enterprise bid schedules to plan and forecast estimates and resource utilization

EFFECTIVE PRECONSTRUCTION REQUIRES COMPLETE VISIBILITY

As a comprehensive tool that manages all the aspects of the preconstruction estimating process, Eos Explorer addresses the requests, creation, management, verification, review and reporting work processes related to estimating. Eos Explorer is a tool for collaboration, allowing the important players on your preconstruction team to have input and visibility into the process.

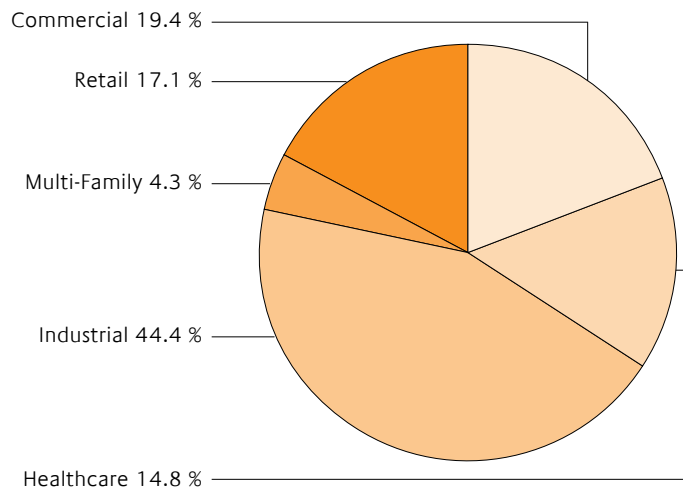

Unlike traditional estimating systems that leave the user or administrator with the laborious task of dealing with mountains of disconnected data, Explorer provides a comprehensive overview of all project estimates, including the various stages (Conceptual, Schematic, etc.), estimating volume (per Project Type, Client, etc.) and estimate status (Awarded, Lost, etc.).

Eos Explorer connects the dots.

ESTIMATE VOLUME, STATUS BY ESTIMATOR

	Estimator	DGG	NJP	RJR	RLM	Total
Status	Awarded	3,379,101	1,524,946	0	52,280,053	57,184,099
	Bidding	7,796,313	28,353,093	1,535,104	9,523,340	47,207,850
	Lost	150,166,587	22,845,193	54,721,282	57,218,053	284,951,115
	Total	161,342,000	52,723,232	56,256,385	119,021,446	389,343,064

ESTIMATE VOLUME BY PROJECT TYPE

Project Type	Estimate Total
Commercial	75,587,281
Retail	66,534,007
Multi-Family	16,892,084
Industrial	172,802,472
Healthcare	57,527,220
Total	389,343,064
